PROJECTS

@PeaceWithACamera

personal photography site • 09/2023 - 11/2023

This is a website that displays some of my wildlife photography. I used React, Redux, and an express router that uses Multer to handle form submissions, and Nodemailer to handle forwarding form submissions to my desired email address. I am currently testing the server locally and look to deploy it soon.

The future of this site is bright. I look to store all of my photos in an AWS S3 bucket to help with speed.

Track It Todo App

Portfolio Project

As a portfolio project to attain honors designation, I built a React Native app that allows a user to create, edit, track, and delete tasks. Future plans for this project include adding additional pages, implementing user login and registration forms coupled with securestore for user convenience. The end product will allow my family to efficiently plan activities surrounding our annual family reunions.
